

Index	Assessment Area	Measure	Definition	Output	Methodology	Objective / Explanation	Consultation questions
3.1	Validation	Critical, Error, Warning types	Display the number of critical, error and warning message types per publisher	Frequency Table	Use the Validator API to pull the count of critical, error and warning types per publisher	Data quality objective: Reduce the number of critical, error and warning types.	
3.3	Validation	Activities	Display number and percentage of how many activities are not making it into the IATI datastore because of validation issues	Number Percentage	Count the number of activities in critically invalid activity files per publisher Calculate percentage of critically invalid activities, by dividing by total number of activities	Data quality objective: Reduce the number of critically invalid activities. As activities in critically invalid files are often unusable and are also excluded from the IATI Datastore, it is essential for data use to strive to reduce this number.
