2.1.1	Data Completeness	Mandatory & Recommended	Assess the proportion of activities that include all mandatory elements with valid data	Percentage Display percentage per mandatory element	Count of active activities containing all mandatory elements with valid data, divided by, count of all active activities Mandatory elements include: Reporting-Organisation, IATI-identifier, Participating Organisation, Title, Description, Activity Status, Activity Date, Sector. To assess if data is valid: **Reporting-Organisation**: reporting-org/@ref must match publisher's reporting-org on the IATI Registry and reporting-org/narrative must have textual content **IATI-identifier**: Activity must contain a nonempty iati-identifier (use Validator check) **Participating Organisation**: Activity must contain at least 1 participating-org, with either reporting-org/@ref or reporting-org/narrative with textual content **Title**: Activity must contain a non-empty title element (use Validator check) **Description**: Activity must contain a non-empty description element (use Validator check) **Activity Status**: Activity must contain an activity-status element with code from the activity-status codelist (use Validator codelist check) **Activity Date**: Activity must contain at least 1 activity-date element. At least 1 activity-date element in the activity must have @type 1 or 2 **Sector**: At least one sector element present at activity level OR in all transactions. If activity level AND more than 1 per vocabulary, a percentage must be present and the combined percentages per vocabulary must add up to 100 (use Validator check)		Should activity date checks include the logic that end dates must not be in the past, and start dates must not be in the future?

2.1.2	Data Completeness	Mandatory & Recommended	Assess the proportion of activities that include all recommended elements with valid data	Percentage Display percentage per recommended element	Count of active activities containing all recommended elements with valid data, divided by count of all active activities Recommended elements include: Country or Region, Budget and Transaction. To assess if data is valid: **Country and/or regions:** Each activity must have at least country and/or region published only at activity level, or one country/region per transaction. If multiple countries/regions are published at activity level, percentages must add up to 100. If countries/regions are published at transaction level, one must be published for every transaction. **Budget:** Activity must have at least 1 budget element with a value greater than 0 OR the activity must have the budget-not-provided attribute AND no budget elements. **Transaction:** Activity must have at least 1 transaction element with a value greater than 0.
