| 2.7.1 | Data Completeness | Financial | Assess if an organisation is publishing incoming funds, outgoing commitments and spend. | Percentage (incoming funds) <br> Percentage (outgoing commitmen ts) <br> Percentage (spend) | Count the number of active activities with valid transactions of type 1 (incoming funds) with a non-zero value. Divide by the total number of active activities. Count the number of active activities with valid transactions of type 2 (outgoing commitments) with a non-zero value. Divide by the total number of active activities. Count the number of active activities with valid transactions of type 3 and/or 4 (disbursements and/or expenditure) with a non-zero value. Divide by the total number of active activities. Valid transactions - value must be of xs:decimal - transaction date iso-date and value-date must be a valid xs :date |  | Should these assessments only apply to activities with no child activities? This is to indicate that they are at the lowest level of hierarchy? |
| 2.7.2 | Data Completeness | Financial | Assess if transactions have a value-date within one month of the transaction. | Percentage | For active activities: Count number of transactions that have a value date within one month of the transaction iso-date. Divide by the total number of transactions |  | What time period should be used here to capture 'sensible' transaction value dates? |

| 2.7.3 | Data Completeness | Financial | Assess if budgets are <br> provided for the <br> whole activity-period | Percentage | Store the actual start date and actual <br> end date for each active activity. If not <br> present, store the planned start and <br> planned end date. Store the earliest <br> valid budget period start date and the <br> latest valid budget period end date. <br> Assess if the budget start date is in <br> the same month and year as the <br> activity start date. Assess if the <br> budget end date is in the same month <br> and year as the activity end date. <br> Count the number of active activities <br> where the above statements are true. <br> Divide by the total number of active <br> activities. Valid budgets - budgets <br> must contain a start date, end date <br> and value date with valid xs:dates. <br> budgets must contain a value that is a <br> valid ss:decimal. Note activities <br> marked with @budget-not-provided <br> are to be removed from the <br> assessment. | The current assessment <br> provides a yes/no <br> answer for each activity. <br> Should this assessment <br> be expanded to capture <br> whether 80/90\% of an <br> activity period is covered <br> by a budget? Please <br> note, budgets of zero <br> value are valid and can <br> be added to cover <br> periods of time when <br> there is no expected <br> spend on an activity. <br> Should the assessment <br> be increased to assess <br> whether a budget covers <br> every day in the duration <br> of the activity? Or is it <br> appropriate to only look <br> at start and end dates? |
